

Site B, Instructor Interview 2

Interviewer: So these are all just based on your class, so maybe that'll be helpful.

Gillian: [0:00:04.0] Okay, on the materials for the class or on the actual lecture.

Interviewer: [0:00:07.0] Lecture and materials.

Gillian: [0:00:09.0] Okay.

Interviewer: So, that should be a little easier. So, are you ready?

Gillian: [0:00:12.0] Yeah.

Interviewer: Okay. First question how do you feel the lessons about qualitative data analysis went?

Gillian: [0:00:22.0] Okay, so I'm trying to remember now.

Gillian: [0:00:36.0] There was a couple of new elements in that class because in a way, having done the interview with you before and knowing that, you know. I don't like being filmed, I've got to say, I hate it, I don't like the way I look, I mean anyway. But just thinking that that was going to be seen by other people. Made me think more carefully about what it is I really want to get across when I'm teaching analysis. And it may be in a way more explicit about certain things that I've always thought but I haven't really got. And one of those was, so is this is this answering your question or not really?

Interviewer: [0:01:14.0] I mean, I think so, we're not done yet. I don't know. Yeah, I don't know.

Gillian: [0:01:19.0] So one of the things I was more explicit about, which I've always thought was, was this part about recognition, about analysis as recognition. And that was why I was really happy that the Maya Hoff reading, that we use that, that we I mean, I wanted to get that in somewhere. And I was kind of squeezing things into place because I was getting towards the end of the semester.

Interviewer: [0:01:48.0] Yes. You've got to get it in somehow. Yeah.

Gillian: [0:01:51.0] So I felt like I felt good about getting that part in because that hadn't explicitly been included in my lectures on analysis before that part about recognition. And then it made me sort of think that through a bit more. And I think that's always been important to me anyway. Like when, when people read through transcripts, I feel like part of what they're doing and why it's important is because they're listening carefully to the other person in a way that I think involves recognition like. If you have to make a code, if you have to go, you know, sort of line by line through something, you can't really do that while not to some extent listening to the other person. And to some extent, putting yourself in their shoes. I know we could never do that. Like, completely. But at least making that attempt, that sort of intention of understanding their meaning. So I felt in a way more clear about that than I have in the past, because I had to put it into words and in a way I hadn't done, because that was a new slide. The one about recognition. I mean, I sort of I don't know if just because I've taught about research quite a long time. Every semester I change the slides and I add things. I take things away. I think, oh, there's too much detail about this. Too little detail about that. Somebody misunderstand. So. So this was one of the changes I had made this semester. As for how it went down, the students had to also I'm also getting mixed up between my two classes.

Interviewer: [0:03:40.0] Oh, you're fine.

Gillian: Because [CLASS] also, they have a coding exercise that they do so I'm trying to remember.

Interviewer: [0:03:48.0] It was the [daughter] interview.

Gillian: [0:03:50.0] Okay.

Interviewer: Yeah.

Gillian: [0:03:57.0] Yeah, I, I think, I wish there had been more time for them to do that. I wish they had had like they could have spent easily like a whole class on just that. And because we had the presentations first and again, it was sort of getting backed up towards the end of the semester.

Interviewer: [0:04:11.0] Yeah.

Gillian: [0:04:12.0] We didn't have as much time as I would have liked for them to do that and.

Interviewer: [0:04:18.0] I feel like that's everyone I talk to though, we never have enough time. They're like, I wish we had more time to just talk about this guys. Us too, but we're in a semester.

Gillian: [0:04:29.0] Yes, yes. So how that works.

Interviewer: [0:04:39.0] I feel like from what you've said so far, it feels like, yeah, I mean, I feel like you went well because you got to include and have a higher focus on recognition. Yeah, that's what I was getting from that.

Gillian: [0:04:48.0] That was something I felt good. And oddly enough that one of the presentations that day, it was this really beautiful piece that she was reviewing. About, it was a kind of prose poem, someone who is in jail. And she said something about, recognition anyway, it just seemed like oddly serendipitous.

Interviewer: [0:05:15.0] Yeah.

Gillian: [0:05:16.0] And

Interviewer: That's cool.

Gillian: [0:05:17.0] Kind of, that was about sort of arts based approaches to research and anyway. I don't know, it made me think it was actually helpful to be observed and to be interviewed because I was thinking, well, what do I really care about? You know, what is this about?

Interviewer: [0:05:33.0] Yeah, that is a good point. It really does help you because you're like. Oh, I should. I got to know that, I guess.

Gillian: [0:05:37.0] Yes, yeah.

Interviewer: [0:05:38.0] I totally get that. Sometimes I do studies that I'm like, oh, how come I haven't asked myself this question before, you know?

Gillian: [0:05:47.0] Yeah.

Interviewer: Like, oh, I'm asking them that. But like, I need to ask myself that.

Gillian: [0:05:50.0] Yeah.

Interviewer 2: [0:05:51.0] So.

Gillian: [0:05:53.0] So and they were doing the exercise. So I'm trying to remember now because again, I changed this every, you know, so they had this sort of like content based. Kind of open coding type thing and then the reflexive coding and then the preset codes. So I'm not sure that the preset code idea worked that well because they really had, you know, it was a new topic for them.

Interviewer: [0:06:19.0] Yeah.

Gillian: [0:06:20.0] So I'm not sure if that exercise, I, if I would have that again, if I used that exercise or if I would, I don't know.

Interviewer: [0:06:28.0] I feel like that seems like that's what teaching is all about. We try it and we're like, mehh, okay, I'll keep it or nope, not this time.

Gillian: [0:06:36.0] Yeah.

Interviewer: [0:06:37.0] So. Okay, cool. And then you've talked about it a little bit, but like if you could say what qualitative like analytic approach or approaches the focus is on.

Gillian: [0:06:48.0] In my classes. Yeah, yeah. I think we go for sort of, I focus more on sort of open. I just thematic not necessarily everything that the Braun and Clarke do, but because I feel like the preset codes and stuff is stuff that they're going to get in other classes like in quantitative, like I'm teaching kind of people who don't necessarily want to specialize in qualitative ultimately because I teach that to anyone in [Introduction to Qualitative Research] and people who are serious about qualitative tend to go for [qualitative methodology course A/B] instead. So I want them to know the open coding kind of stuff because pre-set coding is something you're going to get in quantitative studies to. You people have to.

Interviewer: [0:07:41.0] And you're in both. You were in both, right?

Gillian: [0:07:43.0] No I'm, I, I [research methodology course B] is both.

Interviewer: [0:07:47.0] Okay.

Gillian: [0:07:49.0] But I don't really have a background in quantitative, I just kind of.

Interviewer: [0:07:53.0] For some reason I have that in my head. I don't know why but, well we speak the same language.

Gillian: [0:07:59.0] It's like [research methodology course A] is both too. So I kind of I teach the introduction to very, very much the introductory. But anyway, I know that elsewhere they're going to get this sort of preset operationalize codes and variables and I want them to get the other side more because they're less likely to get that.

Interviewer: [0:08:18.0] Yeah.

Gillian: [0:08:19.0] And less likely to understand the purpose of it. So I emphasize more of the sort of open codes.

Interviewer: [0:08:27.0] Cool, I think that's necessary. It's like, what's the one thing that like I want to get? So you kind of already talked about this, but can you talk about what went really well in the lecture or activities or analysis.

Gillian: [0:08:43.0] What went really well? Let's see. I thought, I was pleased with how their interview, because when they do their interviews, they have to come up with themes based on the interview. I thought the themes were pretty good this semester, so I thought they, they had kind of got the point of it. It's the same as about it's not about what you go with. Because again, because I'm taking this open coding emphasis more. The theme should be about what did you actually hear the person say? Not, what was your interest when you went in and what you asked about? But what did they come up with that surprised you or that was somewhat new to you?

Interviewer: [0:09:24.0] Yeah.

Gillian: Yeah, it does. And I was really pleased with the interviews this semester. That's I thought they did an awesome job. I was really I mean, they're amazing class anyway.

Interviewer: [0:09:34.0] Well, I know some of them and the ones that I know are amazing. So yeah. So yeah. I mean, I just feel grad students are a beautiful breed of people.

Gillian: [0:09:44.0] They sure are, especially in education, because you really have to be a good person to want to get into education. You're not going to get into it for the money or

Interviewer: [0:09:50.0] No you're not. Or the ease or any of that.

Interviewer: [0:09:54.0] Right.

Interviewer: Yeah no, that's great. Yeah, I didn't know that. That's the beautiful part is when things emerge without the unmotivated looking and something just emerges. It's so beautiful.

Gillian: [0:10:04.0] Yeah. And I know that growing. I mean, I know that there's this whole thing about things don't emerge. But the thing is, there's always a two way relationship between the researcher and the person that they're listening to, talking to, and they're going to bring their own stuff and that person is going to bring their own stuff. And hopefully something unique comes out of that blend.

Interviewer: [0:10:23.0] And that's.

Interviewer: [0:10:24.0] That's the coolest when it does. Yeah.

Gillian: [0:10:27.0] Absolutely.

Interviewer: Yeah. Yeah, that's cool.

Gillian: [0:10:29.0] Oh yeah, I thought in the lecture too, I thought like I already had those beginning slides and so the foundations and I changed the order of, I mean, it seems very persnickety to even get into that. But I thought I had to think a little bit more about, I think I changed the order. Like one of the foundational slides was I don't even remember anymore. Oh my god.

Interviewer: [0:10:56.0] It's okay. I talked to [colleague] about my study that I'm going to try to take to publication, and we met on Monday to discuss it. And then I looked at her, I was like, I can't remember what I wrote about. I have no idea.

Gillian: [0:11:07.0] Oh I know what you mean.

Interviewer: [0:11:10.0] I know, like she's like, So what did you come up with? And I'm like, I don't know right now. I wrote this for like three weeks straight and it's been a week away from it and I forgot.

Gillian: [0:11:18.0] I can totally relate to. Yeah, yeah.

Interviewer: [0:11:21.0] I don't think I mean, personally, I mean, you described as persnickety, I guess, but I feel like that's the tiny, nuanced nature of teaching.

Gillian: [0:11:30.0] Yeah.

Interviewer: Because of the change of a slide can like allow things to come together better.

Gillian: [0:11:36.0] Yeah.

Interviewer: [0:11:37.0] Than being spread out. So I mean, I think that's cool. So not just me though. Like I said, I don't know what my opinion means, but yeah.

Gillian: [0:11:46.0] Also I felt like that whole PowerPoint, I tend to do this with PowerPoints. I put way too much information, too much text and it's like

Interviewer: [0:11:55.0] I think everybody does that.

Gillian: [0:11:56.0] Okay. Last semester I thought this was funny. It didn't hurt my feelings, but one of the students said when she, this was [research methodology course B]. She said, yeah, when she gives a PowerPoint I sleep or something. So or I feel like sleeping, it wasn't an intentional. So I thought that was kind of sweet. But so in that PowerPoint, I thought it's

trying to cover way too much. I probably should take three weeks over that, but I don't have the time.

Interviewer: [0:12:22.0] Yeah, yeah.

Gillian: [0:12:23.0] I don't know.

Interviewer: [0:12:24.0] No, I think any time lecture is happening, all of us get tired.

Gillian: [0:12:28.0] Yeah.

Interviewer: I think that's just.

Gillian: [0:12:29.0] And grad students, are tired anyway. Yeah.

Interviewer: [0:12:32.0] Well, all the classes are at the worst possible time for me. At least 1 to 5 is my nap time.

Gillian: [0:12:38.0] Yeah. Yeah, I have some students like that.

Interviewer: [0:12:40.0] Yeah. Like I want to my energy drops. I don't always fall asleep, but I don't. I always I just drop 1 to 5. That's where my energy and then I pick it back up afterwards and I'm great in the morning. It's like the woop and then I'm like, this is right where all my classes.

Gillian: [0:12:54.0] Oh no.

Interviewer: So energy drinks work.

Gillian: [0:12:56.0] I used to have this one anthropology class when I was a grad student and I was allergic to the building, so I would have to take allergy medicine and I would always fall asleep. And it was so embarrassing and it was like a really, you know, really good stuff.

Interviewer: [0:13:10.0] No, yeah.

Gillian: [0:13:11.0] And one time he was talking about norms, cultural norms. And so, for example, falling asleep in class was very rude and I knew he was talking about me.

Interviewer: [0:13:21.0] I honestly it's happened where I've been so tired in [professor's] class and I'm like, thank God [professor] knows me. But like, I'm like, I'm like trying to like or like, chew on something.

Gillian: [0:13:31.0] Ah, yes.

Interviewer: I found eating carrots keeps me up.

Gillian: [0:13:34.0] Okay.

Interviewer: But the problem is then you're eating carrots in class and it's quite loud, but I'm like, but the movement, you know

Gillian: [0:13:39.0] Do you ever find yourself, I would find myself writing and I'm like.

Interviewer: [0:13:43.0] Oh yeah.

Interviewer: [0:13:44.0] My pen has would trail off into nothing.

Interviewer: No, I have the same problem. But it is a grad student thing. I think yours is probably worse, though, because you were allergic to the building.

Gillian: [0:13:56.0] Yes. So I had the choice of either sneezing and eyes running all the time or just falling asleep

Interviewer: [0:14:03.0] Drowsy. Not great options. On the other side of what, words are hard, of cool things that came out of it, were there any was there anything that was particularly challenging this semester with this course?

Gillian: [0:14:17.0] I always sort of doubt myself, especially with analysis part, I think. I doubt myself. I feel like analysis is trying to get at something and I don't know how to put that into words, exactly. So I think, am I wasting their time? Am I doing this all wrong, especially

with the analysis part, right. Anyway, yeah. So, that was there and but I can't put my finger on why that was. So, yeah.

Interviewer: [0:15:16.0] I mean, for me, I feel like it's got to be really hard to teach analysis because there's no right way to do it.

Gillian: [0:15:24.0] Yeah. And there's so many ways to do it. And then how much time do you spend on each one and.

Interviewer: [0:15:28.0] And it's such a personal experience.

Gillian: [0:15:33.0] Yeah.

Interviewer: [0:15:34.0] For me, it feels very like it's just like, my relationship with my participants. It's really intertwined there. And there's just so many things.

Gillian: [0:15:42.0] I love that you say that because that's the part that I feel. Like, I think analysis is a scary thing. And yet it's easy to forget that human part of it, and maybe I would like to find more ways to talk about that.

Interviewer: [0:16:02.0] Yeah, that could be.

Gillian: [0:16:03.0] Recognition was one way.

Interviewer: [0:16:04.0] Yeah, I think that's a big deal.

Gillian: [0:16:06.0] Yeah.

Interviewer: [0:16:11.0] I mean, I can tell you every time I leave a class, I still don't fully know what analysis is.

Gillian: [0:16:15.0] Right.

Interviewer: [0:16:16.0] It's this moving target.

Gillian: [0:16:18.0] Yeah.

Interviewer: [0:16:19.0] We walk closer and then it's farther. We think we know more than we know nothing. What we learn taught us we don't know. Like, okay, constant, constant place of not knowing is where I'm going to be okay with, I guess.

Gillian: [0:16:30.0] Cool.

Interviewer: [0:16:31.0] So I mean, I'm trying to be okay with it, I should say.

Gillian: [0:16:33.0] Yeah.

Interviewer: [0:16:34.0] [professor], actually, he told me all you'll ever get into is more questions.

Gillian: [0:16:41.0] Oh, gosh.

Interviewer: [0:16:42.0] And I was like. He was like, you won't find answers, but you'll get more questions. And I was like, at first, it's kind of beautiful now, but I'm still like. That, like, part of me that wants to, like, master, that.

Gillian: [0:16:55.0] Yes.

Interviewer: [0:16:56.0] Can't.

Gillian: It's a kind of paradox, isn't it?

Interviewer: [0:17:01.0] It is. We're out here in academia trying to like masters of this.

Gillian: [0:17:06.0] Yeah.

Interviewer: [0:17:07.0] And but the ironic part is being a master, is finding out you'll never be a master.

Gillian: [0:17:12.0] Yes, that's beautifully said actually, yeah.

Interviewer: [0:17:16.0] It feels rough, though.

Gillian: [0:17:17.0] Yeah.

Interviewer: In it, so, but, yeah.

Gillian: [0:17:20.0] But, I mean, maybe. Maybe what we get to is at least questioning the certainty you had that was too fixed or too stereotyped or too. I don't know.

Interviewer: [0:17:33.0] Yeah, no, that sounds right.

Gillian: [0:17:35.0] Yeah.

Interviewer: It is. So I think you're probably doing a wonderful job at it. Is there anything that didn't go as planned in the lessons you can tell me about.

Gillian: [0:17:46.0] The time thing? I really, that was one thing. As planned, well, it was. I hope it didn't mess up, you guys, that one of my students didn't want to be filmed.

Interviewer: [0:18:17.0] Oh, yeah. I mean, no, because we're here for you and then, you know, so it doesn't mess us up. It just means that we have, like, we have artifacts from you and we have a lecture. And so, I mean, you know, the most important part of any research is honoring the participants.

Gillian: [0:18:33.0] Yeah. Yeah.

Interviewer: So, yeah, I know it was fine, you know, so.

Gillian: [0:18:41.0] This is more generally about the class. I always I always want everyone to know everyone and everyone to and somehow the very often seems to be a little group usually of international students because my classes are quite big.

Interviewer: [0:18:57.0] Yeah.

Gillian: [0:18:58.0] That don't quite get as integrated as everyone else, that are a little quieter and, and that happens even in this very lovely class. I thought it was a very lovely class, full of very lovely people. And I still felt like they were just a couple of people that were you know, international students.

Gillian: [0:19:14.0] So I would have liked the group work somehow to be slightly more integrated.

Interviewer: [0:19:23.0] That makes sense.

Gillian: [0:19:24.0] Yeah. So, but I'm not sure if that really helps bearing on this particular.

Interviewer: [0:19:29.0] I mean, it doesn't matter. It might, who knows. I mean, you never know right. Until.

Gillian: [0:19:33.0] Right. Right. Right.

Interviewer: [0:19:35.0] I mean, but yeah, I mean, I could see how that could be a challenge because that's. You want your group, you want, generative groups.

Gillian: [0:19:43.0] Yeah.

Interviewer: And if someone, if you notice, someone's not as comfortable. For me, it's harder to be generative around people I'm not comfortable with, you know? But yeah, that's hard. You do have a big class though. I remember walking in and we're like, oh, this is a quite large class.

Gillian: [0:19:59.0] I can't remember if it's 22 or 21 because one of us is 22 or 23, anyway.

Interviewer: [0:20:03.0] Yeah, I'm used to like 16 max. I feel like.

Gillian: [0:20:06.0] 16 max is a nice number.

Interviewer: [0:20:07.0] Yeah.

Gillian: [0:20:08.0] It's about perfect.

Interviewer: Yeah, because then you enough for small groups.

Gillian: [0:20:10.0] Yeah.

Interviewer: [0:20:11.0] And to mix it up enough between groups but also not so many that you can't remember everyone's name.

Gillian: [0:20:17.0] Yeah.

Interviewer 2: [0:20:18.0] So. Yeah. Cool, is there anything, else?

Gillian: [0:20:23.0] No, no, no.

Interviewer: [0:20:24.0] Okay. And so we watched, obviously, we observed and we noticed you used interviews and the movie. Can you talk about walk me through your pedagogical. I hate this word. Pedagogy, pedagogy. Nope. Can't do it. Can't do.

Gillian: [0:20:43.0] Pedagogical.

Interviewer: Pedagogical, there you go. Reasoning for the interview analysis section.

Gillian: [0:20:49.0] The interview analysis. You mean the one they did on their own?

Interviewer: [0:20:52.0] The one where you handed them that [daughter] interview.

Gillian: [0:20:55.0] Oh okay, that, that interview?

Interviewer: [0:20:56.0] Yeah.

Gillian: [0:20:57.0] It was just to have something where they could all work together on the same material, kind of start by themselves. I think they spent 5 minutes by themselves first, then got together in groups and kept going.

Interviewer: [0:21:10.0] Okay.

Gillian: [0:21:11.0] I'm not sure that I left them long enough by themselves. I think that might have been a bit better, maybe to even leave it for 10 minutes with that. By themselves, it's quite dense.

Interviewer: [0:21:23.0] Because five can go fast.

Gillian: [0:21:24.0] Yeah.

Interviewer: [0:21:25.0] You know, but.

Gillian: So that would be one to no change about that. And then they, they got together. So what was the reason for that. And then they got together in groups I guess first to kind of challenge them to try out their own ideas and then to sort of bounce ideas off one another. Yeah.

Interviewer: [0:21:53.0] Kind of like collaborative.

Gillian: [0:21:54.0] Yeah.

Interviewer: [0:21:55.0] Working together?

Gillian: [0:21:56.0] Yeah. And I think they're in groups of three or four. So, yeah.

Interviewer: [0:22:05.0] And how long were they together? 10 minutes, you said?

Gillian: [0:22:09.0] That, no, it was longer. Like half an hour or more. Probably more often that they were actually together.

Interviewer: [0:22:14.0] Okay, cool. And then did they present any of their themes afterwards as groups or.

Gillian: [0:22:19.0] They, yeah, they then after that, we came together as a whole class and they talked about what they had sort of come up with, how they had agreed or disagreed.

Interviewer: [0:22:29.0] Did you notice themes between like across all the groups? Did they kind of pick up on the same thing or were there like a lot of variation?

Gillian: [0:22:37.0] They had trouble with the preset. I think for good reason because it's difficult to do a preset something on something that's like a completely different topic covered.

Interviewer: [0:22:47.0] Yeah, yeah.

Gillian: So anyway, that, that taught me not to, not to try that again.

Gillian: [0:22:59.0] I think they noticed things I hadn't noticed in it. But I can't remember what they were now.

Interviewer: [0:23:02.0] No, that's cool, though.

Interviewer: [0:23:04.0] Yeah.

Gillian: [0:23:05.0] And honestly, I like sharing that, that particular piece because I find [daughter] really inspiring. Like, I thought her work was very moving. Somehow the story of her dad, I kind of wanted to share that with them because I thought it was moving and inspiring.

Interviewer: [0:23:25.0] Kind of the recognition part too.

Gillian: [0:23:27.0] Maybe I mean, not even consciously because I've used that before. I had that word in my head, but I always want to share something that I find inspiring and moving.

Gillian: [0:23:44.0] So, I always kind of hope they'll find something positive.

Interviewer: [0:23:48.0] Yeah.

Gillian: Which I think they did. I think a couple of them came up with the beauty of the beauty of Alzheimers. I mean, which is an odd thing to say. But.

Interviewer: [0:23:56.0] It's true. There are some. Yeah.

Gillian: [0:23:58.0] Yeah. In that particular interview that, that did come through and so. Yeah. Did that.

Interviewer: [0:24:05.0] Yeah.

Gillian: [0:24:06.0] Answer your question.

Interviewer: Yeah.

Interviewer: [0:24:07.0] And then I kind of have the same question. But for the film, what was like the pedagogical.

Gillian: [0:24:12.0] Oh yeah, yeah. It's okay. You added an L.

Interviewer: [0:24:19.0] I did.

Gillian: No I have trouble with that word too.

Interviewer: I don't like it, can't we just call it something else. But we don't. We call it that.

Gillian: [0:24:21.0] Yeah. The movie. Yeah, the movie. Again, I find the movie very moving personally and I wanted, I chose that movie also because it's from, I have let's see, three students from China and one from Taiwan in that class. So I wanted something that they will feel some ownership and recognition.

Interviewer: [0:24:43.0] Yeah.

Gillian: Using that working. And have you seen the movie?

Interviewer: [0:24:49.0] Uh uh.

Gillian: Okay.

Interviewer: I almost was like, I might just go and watch it, but it was finals.

Interviewer: [0:24:52.0] And I was like.

Gillian: [0:24:53.0] Oh, yeah, yeah.

Interviewer: [0:24:54.0] But no, the way you described it, I was like, this thing, sounds interesting.

Gillian: [0:25:00.0] Yeah, it's just like so many layers you could unpack in that movie. Like about capitalism, about globalization, about colonialism, about good art authenticity. So it's an

amazing movie. I mean, just layers and layers and layers. So I again, I enjoy sharing it because I think it's a really well done movie. It's done. I also kind of look for things that are done by insiders. So it was made by a Chinese, produced by a Chinese couple. Yeah.

Gillian: [0:25:44.0] So I enjoyed sharing that with them. And then I came away, we were a little bit short on time because someone had to.

Interviewer: [0:25:52.0] I can't remember.

[0:25:57.0] (inaudible)

Gillian: Okay.

Interviewer: Because we didn't come. Because it was the movie and presentations and then.

Gillian: [0:26:01.0] Right. So that lack of time.

Interviewer: [0:26:05.0] Yeah.

Gillian: Came into it again. Again, bad planning on my part.

Interviewer: [0:26:08.0] I don't know, you're working with a pretty tight system, so. I don't know. I don't know. But you can't create a space that does all the things.

Gillian: [0:26:19.0] But I thought, I'm really sorry because I really should take notes after these.

Interviewer: [0:26:25.0] Oh, no, you know, you should.

Gillian: [0:26:27.0] Because I don't.

Interviewer: [0:26:29.0] You're just living. You're just supposed to be living your life.

Gillian: [0:26:32.0] Yeah, yeah, yeah.

Interviewer: And then we come in and just find out what. What came out for you.

Gillian: [0:26:36.0] I think I would do that again. I would use that again just because it was, it's, I love sharing that piece. It's artistically beautiful. It's very thoughtful. It kind of there's no narration or anything. You just kind of see things go along.

Interviewer: [0:26:54.0] I going to have to watch it now.

Gillian: [0:26:55.0] Yeah. If you like art, especially.

Interviewer: [0:26:59.0] I do. Yeah

Gillian: Yeah. Because this is, it's it's about these this sort of like sweatshop, of, of Chinese workers who do copies of Van Gogh's.

Interviewer: [0:27:08.0] Oh, you know what? We had this conversation. You did explain it to me, but. But like you, I've been too far away from that completely.

Gillian: [0:27:16.0] It's okay don't worry.

Interviewer: But I remember. Yeah, no, I want to watch that. That sounds because I forget what you said, but it's just like they don't like what they're making. They don't even like like the significance of it. Right. Or was that something like that?

Gillian: [0:27:29.0] Well, one of them ends up going to Amsterdam and looking at the, it's kind of just this cheap trinkets store where his and he he was imagining this big gallery, you know, and and he looks at the price markup and how much less they get paid and.

Interviewer: [0:27:45.0] Oh yeah.

Interviewer: [0:27:46.0] So all this stuff about sort of global capital comes into it, but also him thinking about his own capacity and he starts to do his own art.

Interviewer: [0:27:55.0] Oh, that's beautiful.

Gillian: [0:27:56.0] Yeah.

Interviewer: [0:27:57.0] Because I have watched because my undergrad was in merchandising. I've watched quite a few videos on what merchandising entails and buying and who you're buying from and what you're paying. Oh, you.

Gillian: [0:28:09.0] Oh you probably have a whole different take on this movie. That would be you'd probably know all this background stuff.

Interviewer: [0:28:14.0] A little bit. Yeah. I mean, like just that what we pay. I mean, I used to buy shoes for Kroger, kids shoes, that were a dollar 50 for me to buy. There is no way someone was being paid a fair wage.

Gillian: [0:28:27.0] Yeah.

Interviewer: [0:28:29.0] Just no possible way.

Gillian: [0:28:30.0] Yeah.

Interviewer: [0:28:31.0] It's crazy. And and then just in my undergrad, we did watch a lot of videos of like, I mean trying to get us to be more ethical with our decisions. But it's, we should play those videos for corporations.

Gillian: [0:28:42.0] Yeah.

Interviewer: [0:28:43.0] Not fine, but. You know, I got to watch it. That would be nice.

Gillian: [0:28:47.0] Yeah. I'm used to starts doing art which portrays the, the, what do you call it. It's kind of like somewhere between a factory and a sweat shop, where they're doing the paintings. You know, he does a painting of that.

Interviewer: [0:28:59.0] Oh cool.

Gillian: They're all like, some of them sleep on the floor there, they.

Interviewer: [0:29:03.0] That sounds about right.

Gillian: [0:29:04.0] Yeah. And, what is it? Oh yeah. They watch a movie about Van Gogh and they sort of identify with him. Because he paints. He was very poor. (inaudible) And so when they go to Amsterdam, they're so disillusioned with, it's like three or four of them going, there's one in Central Park. They're so disillusioned with this kind of, the commercial aspects, but they're still very, very full of respect for Van Gogh. And they go to his grave.

Interviewer: [0:29:39.0] Oh, that's cool.

Gillian: [0:29:40.0] They go to the Van Gogh Museum, they think about his life, they think about themselves, you know, comparison with him.

Interviewer: [0:29:49.0] That's really cool.

Gillian: [0:29:50.0] Yeah, it's.

Interviewer: [0:29:52.0] It's almost like they are in some sense, like the researcher.

Gillian: [0:29:58.0] Yeah, you're right, you know.

Interviewer: [0:29:59.0] Yeah. Because they're, like, trying to understand all they can about this and like learning Van Gogh through painting Van Gogh's words. Yeah, so that's very cool.

Gillian: [0:30:10.0] Yeah.

Interviewer: Well, I'm glad your students got to see it. I want to watch it.

Gillian: [0:30:13.0] Yeah, it's really moving to see them all together, watching this movie together about Van Gogh and yeah, you know, sort of crying at certain points and yes, it's amazing. It's amazing movie, actually.

Interviewer: [0:30:24.0] Okay, that'll be, I don't have anything planned for well, until next Tuesday. So I'm trying to keep my schedule open so I can do that kind of stuff. Fun stuff.

Gillian: [0:30:33.0] I had to buy it on Vimeo. I think it, it wasn't very expensive.

Interviewer: [0:30:36.0] Okay, that's not bad. My stepdad also, I use his YouTube premium.

Gillian: [0:30:41.0] Oh, Okay.

Interviewer: [0:30:42.0] I may be 33 years old, but I still use this.

Gillian: [0:30:44.0] It's okay, don't worry. They have a cut version on on YouTube. I wouldn't watch that. I watched the whole thing.

Interviewer: [0:30:50.0] Okay, watch the whole thing.

Interviewer: I don't really get it.

Interviewer: [0:30:52.0] I'll make sure, I'll make sure or I can search the Internet. Who knows? Okay, anything else on that?

Gillian: [0:30:59.0] You know I, yeah, like I said before, I like certain things that I find moving. I think the fact that they had for the movie, they were looking for sort of bigger themes rather than small codes. And I felt like looking for themes was sort of a way to be attentive to the movie and maybe in ways that we're not normally. So

Interviewer: [0:31:27.0] It would be interesting to watch a movie with, like, the purpose of like. Analysis.

Gillian: [0:31:33.0] Yeah.

Interviewer: [0:31:35.0] It's definitely.

Gillian: [0:31:36.0] Yeah.

Interviewer: Which is also interesting. I wonder if we notice stuff that we wouldn't notice if we're not in the researcher mode.

Gillian: [0:31:43.0] Yeah, I mean definitely.

Interviewer: There's probably two sides to it.

Interviewer 2: [0:31:44.0] Yeah.

Interviewer: [0:31:46.0] That's cool. I think you answer that. So across your lessons, were there any questions or concerns or comments that came up from the students within the the analysis that we kind of focused on?

Gillian: [0:32:27.0] I'm thinking now, on. I'm trying to think of people who had problems with the, with coding. And part of that would be maybe focusing on something that didn't seem like maybe an interesting quirk of language, but not really kind of getting at what was said. That was one example. Another example is.

Interviewer: [0:33:16.0] Maybe like kind of like I don't even know if this would be the right way to say it but like surface level analysis.

Gillian: [0:33:21.0] Sort of.

Interviewer: I don't know if I should add analysis to that, but just like surface.

Gillian: [0:33:25.0] Yeah, like, like this was odd rather than this was about this.

Interviewer: [0:33:30.0] Yeah.

Gillian: [0:33:32.0] But from some perspective, maybe that's not service. Like if you're doing something more language oriented, that might be very relevant.

Interviewer: [0:33:38.0] Yeah.

Interviewer: [0:33:39.0] And so who's to say and then sometimes I get people doing very, very general codes that are not useful because they're like so broad that they like the word experience or life or, you know.

Interviewer: [0:33:53.0] Laughter.

Gillian: [0:33:54.0] Sometimes, people do that.

Interviewer: [0:33:57.0] It's like the first level of coding, almost like, when and then you gotta break it down to those, like, at least that's what I do. I don't know if I do it right, but like I will notice big things that are like everything. And then I go down to like what they actually like, oh, they're talking about this and this and this and this. But then I get really down into the actual it's like the difference between noticing the occasions versus the nuances maybe. I don't know.

Gillian: [0:34:28.0] Interesting. Yeah.

Interviewer: [0:34:29.0] Because it is occasioned, right? Like it's I don't even know if that's the right word, but.

Gillian: [0:34:33.0] No, that's a good word. And it's sort of, it's, it's that situation at that time, that place, that person.

Interviewer: [0:34:40.0] Yeah. Yeah, yeah.

Gillian: [0:34:43.0] I don't know if this is relevant either, but because of, because of this project that you guys are doing. I started talking to [professor] a lot about coding and analysis too, and we do it completely differently. Which is really weird, it's funny because we talk a lot about philosophical things.

Interviewer: [0:35:04.0] Yes.

Gillian: This is not relevant.

Interviewer: [0:35:05.0] But it's okay.

Gillian: [0:35:06.0] We talk a lot about philosophical things and things that do apply to qualitative research. But when it comes down to the sort of nitty gritty of what we teach in our classes, I've always kind of tried to stay away from his stuff because I don't want to be emitting. Sort of

Interviewer: [0:35:21.0] [redacted] You don't need anything else.

Gillian: [0:35:24.0] [redacted] So I found out we were doing coding very differently and that was really interesting because I do it sort of more like paraphrasing and [professor] does it with more high inference, you know, [professor] goes more into the high inference stuff.

Interviewer: [0:35:44.0] Yeah. So it is interesting though because they don't, like the different ways in which I've learned [professor's], obviously.

Gillian: [0:35:51.0] That's great.

Interviewer: [0:35:52.0] And then I, I mean, I'm in a discursive psychology course that's.

Gillian: [0:35:57.0] That's completely different. Because then you're looking at more the language the structure of the language. So it is fascinating.

Interviewer: [0:36:03.0] Yeah.

Gillian: I mean, you could do any one of these or narrative or something.

Interviewer 2: [0:36:05.0] Yeah.

Gillian: [0:36:07.0] Use different criteria. And gosh, it would be really interesting to look at the same piece, like coded all these different ways.

Interviewer: [0:36:15.0] That would be very interesting. It would be. I mean, maybe that could be one of your next classes. You do throw out some crazy ones to just see the difference.

[0:36:24.0] – [0:36:53.0] [redacted]

Gillian: [0:36:53.0] Yeah.

Interviewer: [0:36:54.0] But yeah, no, not any that I've been in yet. Have we used the same piece to do different analysis, like different types of coding on this book?

Gillian: [0:37:06.0] Well, well this book, um, five ways of doing qualitative analysis. It does that.

Interviewer: [0:37:09.0] Oh, okay, cool.

Gillian: [0:37:10.0] But then I was just kind of, I mean, it's a very, very dense book and I was really excited about seeing all the same pieces. But what surprised me was how similar all the kind of processes were. And then I thought. I don't know. I assign that book. I think I've told you this before. I assign that book at least one semester, but it was, you know, like their getting through all this very, very dense stuff just to find out that you basically do the same thing. And then I just thought, okay, forget it. It's going to kind of summarize it.

Interviewer: [0:37:46.0] Yeah. Yeah. But I mean, it's also.

Gillian: [0:37:52.0] That would be interesting, wouldn't it. I mean, I bet [professor] has already thought of that, so.

Interviewer: [0:37:56.0] Oh, I have no idea. I don't know about [professor] either. But that would be I mean, I'm sure it would help if every class had that because I know that my discursive psychology course really helped me because almost from the beginning we started doing analysis.

Gillian: [0:38:10.0] Right?

Interviewer: [0:38:11.0] And it wasn't different schools of analysis, but it was different, almost like silos within discursive psychology.

Gillian: [0:38:21.0] I see.

Interviewer: So we're focusing on different things each time and so that yeah.

Gillian: [0:38:26.0] Oh are there a lot of different silos within?

Interviewer: [0:38:28.0] What was it, maybe I shouldn't say silos, but like so in one section we would pay attention to like the turn in talk so like the change and then the next time we'd try to identify any reper.. interpretive repertoires and then maybe subject positions or see if we can notice anything with steak that's happening. So yeah, I think that would be just as beneficial with because we really learn analysis when we do it.

Gillian: [0:38:55.0] Yeah.

Interviewer: [0:38:56.0] Within the different schools, you know, I just wish it wasn't always a whole huge paper at the end.

Gillian: [0:39:01.0] Yeah, yeah.

Interviewer: So doing it that way in class could be really cool.

Gillian: [0:39:03.0] So like each week maybe a different.

Interviewer: [0:39:06.0] Yeah, same, same data set so that there is so much familiarity with it. So you don't have to be a new one.

Interviewer 2: [0:39:10.0] Yeah, it's kind of mind boggling how much, you know, how many different things you can look for.

Interviewer: [0:39:19.0] It's crazy, I have panic attacks regularly. I'm like, I need to know all the things that I don't know all the things.

Gillian: [0:39:23.0] Yes, me too. Yeah.

Interviewer: [0:39:27.0] How do I know all the things? I don't. But yeah, yeah. So I think that pretty much sums that one. Anything else you wanted to add on that?

Gillian: [0:39:39.0] Again, it's not really relevant but yeah. In relationship to [professor's] stuff, I, I, yeah, I don't do the meaning fields and I don't do. There's a lot of stuff I don't do, I don't do what [professor] does.

Interviewer: [0:39:50.0] It was nice, [professor] told me, I didn't do meaning fields on mine. But she's like, you're pretty intuitive on your stuff, so you don't always need the meaning field when you can pick it up.

Gillian: [0:40:01.0] Yeah.

Interviewer: I don't know if that's true or not, but I mean, because it was AA, so I knew these people intimately, so I didn't have to really, so that was already there for me because I found it hard when I was doing some of those other analysis, like ways to do that in [professor's]. Sometimes it felt redundant to me because I already knew it.

Gillian: [0:40:18.0] I see.

Interviewer: [0:40:19.0] But I get that you want to put it down, to kind of show.

Gillian: [0:40:22.0] Yeah.

Interviewer: [0:40:24.0] But it's interesting how we all, depending on the dataset, what that type of analysis like means, like your degree of separation can make it very different.

Gillian: [0:40:34.0] Actually, that would make it hugely different.

Interviewer: [0:40:36.0] Yeah.

Gillian: Like you'd be aware of all these implicit meanings and sort of inside references that other and even the way people use language that other people wouldn't.

Interviewer: [0:40:46.0] Yeah, there's little sayings that I know compared to other people.

Gillian: [0:40:49.0] Yeah.

Interviewer: Because when I did a shared data analysis with, in [professor's] class on the same data, a lot of people are like, oh, this is super interesting. I'm like, but it's not, I already know that.

Gillian: [0:40:57.0] Okay.

Interviewer: You know? So there's also that where you're like, you can get too close and not think it's that interesting anymore. But it is.

Gillian: [0:41:04.0] Yeah.

Interviewer: Which feels very [professor] like and [professor] like that. Like it's the stuff that's a norm that you need to look into making it explicit.

Gillian: [0:41:14.0] Yeah.

Interviewer: For sure. So yeah.

Gillian: [0:41:17.0] Oh, one thing that didn't go quite I said already about the time thing, I can't remember if. I would have liked them to have had more time talking about their own interviews with each other. And I felt like that got sort of squeezed. Anyway

Interviewer: [0:41:31.0] So did they have more time on the interview data you gave them than their?

Gillian: [0:41:35.0] I mean their own, yeah. Like the week afterwards was supposed to be when they brought their own interviews in, sort with each other about the themes they found. So if they make sense to each other and that really, really got out. So again, a timing thing, a planning thing. A timing thing.

Interviewer: [0:41:54.0] We just got to change all system.

Gillian: [0:41:55.0] Yeah.

Interviewer: [0:41:58.0] Okay. If you could name like one or two things or more maybe that you wish, like you would hope the students got out of the class, they walked away from your class, like,

Gillian: [0:42:07.0] Okay.

Interviewer: [0:42:08.0] What are some things you'd want them to walk away with?
Regarding data analysis.

Gillian: [0:42:14.0] Yeah. Maybe that. Okay. Bearing in mind that I have a lot of people coming into my classes who have a background in more quantitative. Maybe this is their own fault. Or. I want them to go away, realizing that what they bring to the class, their biases, their feelings, their experiences, their interpretations are not a sort of you know, I'm, there tends to be the idea in quantitative research and analysis that you have to get rid of all those things. But those things can be generative and creative and in conversation with the theater and not sort of getting in the way of something, but there's something that's unique that they bring to the research. So I think I would like them to see that as a positive. And I once heard this sort of. Not really a crisis, but this time where I thought, well, because I was reading a lot about how reductive analysis is because it always is, it always leaves out something. But I kind of like remembering that it adds something to it. Or is that something unique because you've got these two, you know, this unique dataset and this unique person coming together and that person will notice something that no one else in the world probably will notice because they bring their own baggage to it. And so to see that as, I think that's something I would like students to go away with, to see what they bring as a strength and to see that there's something to listen for as well that's (inaudible).

Interviewer: [0:44:13.0] Yeah. I like that. You just described my favorite thing about qualitative research.

Gillian: [0:44:16.0] Oh, cool. Okay

Interviewer: [0:44:17.0] That we're not. We're here.

Interviewer: [0:44:19.0] Yeah.

Interviewer: We're here. Like, we're going to. This is going to bring something.

Gillian: [0:44:22.0] Yes.

Interviewer: [0:44:23.0] I have to remind myself of that often. So, yeah, that's beautiful. And then finally, just anything else you'd like to share?

Gillian: [0:44:31.0] I don't think so. Thank you.

Interviewer: [0:44:34.0] Yeah, thank you.

Gillian: [0:44:35.0] For letting me think it all through. That was actually really helpful.

Interviewer: [0:44:38.0] Good, yeah. I'm glad it helped you. Yeah, I'm happy to.
